

Post-doctoral Scholar in ocean biogeochemical modeling.

The Department of Earth System Science at the University of California, Irvine seeks a postdoctoral scholar to participate in research on ocean biogeochemical cycles. The successful candidate will work closely with François Primeau and Keith Moore to construct and test hypotheses regarding the role of variable C:N:P stoichiometry on the ocean's ecosystems and carbon cycle. The project involves collaborations with the National Center for Atmospheric Research and Sandia National Laboratories. The position will be initially for 1 year, renewable for an additional 2 years, salary commensurate with qualifications. The successful candidate should have a PhD in oceanography or related fields. Experience with developing and running 3D ocean general circulation models including biogeochemical modules is desirable. Send applications including CV, a statement of research interests and a list of three references to: Dr. François Primeau, Rm 3216 Croul Hall, Department of Earth System Science, University of California, Irvine, Irvine, CA 92697-3100. Electronic submissions are preferred and can be sent to fprimeau@uci.edu.
